

README.md

Separate PDF version of **README.md** for the Daily Habit Monitoring System project.

```
# Daily Habit Monitoring System
```

1. Project Description

Daily Habit Monitoring System is a Python desktop application built with Tkinter and MySQL.

The system allows a user to:

- Register an account
- Login/logout
- Add habits
- View habits
- Search habits
- Update habits
- Delete habits
- Mark today's habit as Completed or Not Completed
- View daily habit records

2. Technologies

- Python 3
- Tkinter
- MySQL
- mysql-connector-python

3. Project Files

- `daily\_habit\_monitoring.py` - main application
- `database.sql` - MySQL database/table script
- `requirements.txt` - Python dependency
- `README.md` - setup instructions
- `PROJECT\_REPORT.md` - project report
- `DEMO\_AND\_VIVA.txt` - demonstration and viva preparation
- `.gitignore` - files excluded from Git

4. Requirements

Install:

1. Python 3
2. MySQL Server
3. pip

Tkinter normally comes with Python. On some Linux installations it may need a separate system package.

5. Installation

Open a terminal in the project folder.

```
```bash
pip install -r requirements.txt
```
```

Start the MySQL server.

Open `daily\_habit\_monitoring.py` and change:

```
```python
MYSQL_PASSWORD = "YOUR_MYSQL_PASSWORD"
```
```

to your local MySQL root password.

6. Run

```
```bash
python daily_habit_monitoring.py
```
```

The program automatically creates the `habit\_monitoring` database and required tables.

7. Manual Database Setup

The SQL file can also be executed manually:

```
```bash
mysql -u root -p < database.sql
```
```

8. Main Database Tables

users

Stores account information.

habits

Stores each user's habits.

habit_records

Stores the daily status of each habit.

9. Main SQL Concepts Demonstrated

- CREATE DATABASE
- CREATE TABLE
- INSERT
- SELECT
- UPDATE
- DELETE
- WHERE
- ORDER BY
- GROUP BY example
- PRIMARY KEY
- FOREIGN KEY
- JOIN
- LIKE/search

10. GUI Concepts Demonstrated

- Login screen
- Registration form
- Labels
- Entry widgets
- Buttons
- Combobox
- Radio buttons
- Treeview
- Search
- Update/Delete
- Multiple screens
- Message boxes

11. Expected Output

On successful execution, the Login screen appears.

After login, the Dashboard provides:

Add Habit | View Habits | Search Habit | Update Habit
Delete Habit | Mark Completed | Daily Records | Logout

12. Important Note

This is an academic project. The current demonstration stores passwords directly in the database. A production application should use s
